Die Hirnforscherin, die den Verstand verlor - Barbara K. Lipska
2018-09-03

Die spektakulären Erlebnisse einer Hirnforscherin Dr. Barbara Lipskas längst geheilt geglaubter Hautkrebs streut ins Gehirn. Doch es kommt noch schlimmer: Sie erfährt einen tiefgreifenden Persönlichkeitswandel, 60 Tage lang durchlebt sie einen temporären Wahnsinn, der erst wieder verschwindet, als 18 Tumoren im Gehirn gefunden und entfernt werden. Die Expertin für Schizophrenie und andere psychische Erkrankungen erzählt, wie sie selbst erlebte, was sie zuvor nur aus ihrer Forschungsarbeit kannte: Anschaulich und erschütternd berichtet sie, wie sie ein völlig anderer Mensch wurde, ihre Familie tief verletzte, Kollegen vor den Kopf stieß, plötzlich einfachste Dinge nicht mehr konnte, die Orientierung verlor und davon überzeugt war, dass sich alles und jeder gegen sie verschworen hatte. Gleichzeitig stellt die renommierte Neurowissenschaftlerin die neueste Forschung darüber vor, was bei psychischen Erkrankungen im Hirn passiert und zeigt – quasi am eigenen Fallbeispiel –, wie unser Hirn funktioniert und wie fragil es ist.

Dermatologie Venerologie - Peter Fritsch 2018-05-10

Dieses Buch ist grundlegende wissenschaftliche Einführung und reichhaltiges Nachschlagewerk in der Dermatologie. Sein Bestreben ist, das Warum und Wieso tischfertig aufzubereiten und gleichzeitig Lesevergnügen zu gewähren. Für die Praxis bietet es eine verlässliche Orientierung in Diagnostik und Therapie, und durch die konzentrierte, aber wohltdosierte Darstellung ist es gleichermaßen zur Prüfungsvorbereitung geeignet. Die vollständig überarbeitete 3. Auflage zeigt die Dermatologie und Venerologie in all ihren Facetten. Das Buch beschreibt alle wichtigen dermatologischen Krankheiten und gibt einen Einblick in angrenzende Fachgebiete wie Phlebologie. Das erfolgreiche didaktische Konzept stützt sich auf viele Fallbeispiele, erklärende Nebenbemerkungen sowie zahlreiche brillante Bilder. Das Buch ist ein einzigartiger Dermatologie-Kompass für alle praktisch tätigen neugierigen Ärzte, Dermatologen in oder nach der Weiterbildung und Medizinstudenten.

Baran and Dawber's Diseases of the Nails and their Management - Robert Baran 2008-04-30

This new edition brings together five leading authorities in nail surgery in this well established and definitive textbook. The entire text is extended in this edition, and particular emphasis is placed on the advances in treatments that have taken place in recent years.

Considerable strides have been made in the treatment of fungal diseases (onychomycoses) with the appearance of new therapeutic agents. There is also much greater coverage of nail surgery to reflect the increasing involvement of the dermatologist in this field. The section on nail tumours has also been expanded. Drs Baran and Dawber have been joined by David de Berker, Eckhart Haneke and Antonella Tosti on the editorial team. This move is representative of the major European contribution to the field of nail surgery in recent years. Significant contribution has come from Dr Elvin Zook, the eminent American hand surgeon, who has helped to ensure that the book is as relevant in North America as it is in Europe.

Historic Documents of 2016 - Heather Kerrigan 2017-06-22

Published annually since 1972, the Historic Documents series has made primary source research easy by presenting excerpts from documents on the important events of each year for the United States and the World. Each volume pairs 60 to 70 original background narratives with well over 100 documents to chronicle the major events of the year, from official reports and surveys to speeches from leaders and opinion makers, to court cases, legislation, testimony, and much more. Historic Documents is renowned for the well-written and informative background, history, and context it provides for each document. Organized chronologically, each volume covers the same wide range of topics: business, the economy and labor; energy, environment, science, technology, and transportation; government and politics; health and social services; international affairs; national security and terrorism; and rights and justice. Each volume begins with an insightful essay that sets the year's events in context, and each document or group of documents is preceded by a comprehensive introduction that provides background information on the event. Full-source citations are provided. Readers have easy access to material through a detailed, thematic table of contents, and each event includes references to related coverage and documents from the last ten editions of the series.

The True and Outstanding Adventures of the Hunt Sisters -

Elisabeth Robinson 2004-01-07

The bestselling status (and subsequent blockbuster film adaptations) of Bridget Jones's Diary and Divine Secrets of the Ya-Ya Sisterhood is proof of the enduring strength of this category. Although the novel is invented, Robinson is a successful Hollywood producer whose credits include Braveheart and Last Orders.

Pocket Atlas of Pulse Diagnosis - Cheng-Hong Lin 2008

The Pocket Atlas of Pulse Diagnosis unravels the mystery of pulse diagnosis. Detailed explanations of the 28 individual pulses are presented, along with simple diagrams that vividly illustrate how the different pulses should feel like under the fingers at each level of palpation.

Basics of Oncology - Frederick O Stephens 2009-04-29

"Basics of Oncology" provides an easily understood and general overview of the basic medical, scientific and clinical aspects of cancer. Causes, pathology, clinical features, diagnostic investigations, treatments and outcomes are all carefully explained and discussed, both for cancers in general and for the common cancers in individual countries. The reader will thereby be provided with an understanding of how and why people develop cancer, how the body reacts to cancer, what can be done to prevent the disease, and how the various cancers are best diagnosed and treated. The book will serve as a sound basis for the more detailed or specific studies that may be needed in different areas of practice and in different countries. It will be invaluable for students of medicine, nurse oncologists, students of medical sciences and other health professionals

in all parts of the world.

Age-related macular degeneration (ARMD) - Sics Editore 2014-10-01
Age-related macular degeneration is the most important cause of visual impairment in the elderly. The non-exudative or dry form progresses slowly, the exudative or wet form rapidly (within weeks or months). Refer a patient with suspected exudative form of the disease without delay for investigations and treatment. Also consider the significance of the disease in the patients' daily life.

Hormones and Cancer - Wayne Vedeckis 1996-04-01

The series, Hormones in Health and Disease, was launched in 1993 to provide a scientific platform for investigators engaged in research on the biological actions of hormones and to anticipate relevance for their findings in clinical applications. The first volume of the series was dedicated to the discussion and understanding of molecular mechanisms by which steroid hormones influence target cells in normal and pathological conditions. With the diversity of information and the vast amount of literature on steroid hormone physiology, a more thorough treatment of Hormones and Cancer was identified as a timely topic. In this second volume in the series, Dr. Wayne V. Vedeckis has successfully undertaken the monumental task of editing the findings of the leading investigators in hormone and cancer research. Dr. Vedeckis brings to this project two decades of research experience in hormone action; he is actively engaged in elucidating hormone and cancer interrelations. It is a pleasure to welcome him to the series as an editor and congratulate him and all contributors in presenting this comprehensive treatise. The 20 chapters include discussions on contemporary topics relating control of cell division and signal transduction to the basic mechanisms of carcinogenesis by cloning patient genes, and recognizing the importance of steroid receptors in treatment protocols of various endocrine abnormalities.

TNM Classification of Malignant Tumours - Leslie H. Sobin 2011-08-31

TNM Classification of Malignant Tumours, 7th Edition provides the latest, internationally agreed-upon standards to describe and categorize cancer stages and progression. Published in affiliation with the International Union Against Cancer (UICC), this authoritative guide contains important updated organ-specific classifications that oncologists and other professionals who manage patients with cancer need to accurately classify tumours for staging, prognosis and treatment. The major alterations addressed in the 7th Edition concern carcinomas of the oesophagus and the gastroesophageal junction, stomach, lung, appendix, biliary tract, skin, and prostate. In addition, there are several entirely new classifications: gastrointestinal carcinoids (neuroendocrine tumours) gastrointestinal stromal tumour upper aerodigestive mucosal melanoma Merkel cell carcinoma uterine sarcomas intrahepatic cholangiocarcinoma adrenal cortical carcinoma. A new approach has also been adopted to separate anatomical stage groupings from prognostic groupings in which other prognostic factors are added to T, N, and M categories. These new prognostic groupings, as well as the traditional anatomical groupings, are presented for oesophageal and prostate carcinomas. Auflage 2021) - Christian Meyer-Esch 2021-06-07

Viele an Krebs erkrankte Menschen sind mittellos und auf Sozialhilfe angewiesen. Im Gegensatz zu reichen Menschen, die sich auch Heilpraktiker und naturheilkundliche Therapien leisten können, stehen den Mittellosen in der Regel nur die Standard-Therapien der

Schulmedizin zur Verfügung. Dieses Werk wurde daher geschaffen, um auch mittellosen Menschen Zugang zu alternativen Krebstherapien zu ermöglichen. Denn viele naturheilkundliche Therapien sind äußerst preisgünstig und können daher auch problemlos von sozial schwachen Menschen bezogen werden. Die Therapien in diesem Buch reichen von 50 Cent bis zu 85 Euro/Monat. Jeder hat daher die Möglichkeit, ganz nach seinem Budget sich die Therapien selbst zusammenzustellen. Auch im Jahre 2021 bekommen Krebspatienten immer noch fragwürdige Chemotherapien vorgesetzt, die nachweislich bei den meisten Krebsarten überhaupt keine Wirkung haben. Im Gegenteil, das Risiko an Krebs zu erkranken nimmt dadurch noch weiter zu. Warum werden Krebspatienten mit einer "Heil"-Methode behandelt, die genau diese Krankheit AUSLÖST? Auch ist die Heilungsrate in all den letzten Jahren und Jahrzehnten kaum gestiegen. Ist eine Heilung möglicherweise gar nicht gewollt, weil man mit den jetzigen Methoden sehr gutes Geld verdienen kann? Dieses Buch beweist mit zahlreichen Studien, dass die Krebsforschung deutlich weiter ist, als man uns in den Mainstream-Medien und der Schulmedizin erzählt. Es werden 59 Heilverfahren vorgestellt, die in wissenschaftlichen Studien, teils sogar in Fall-Studien an Menschen, nachweislich zur Heilung geführt haben. Wohl gemerkt allein und ohne Hilfe von Chemotherapie oder Bestrahlung! Darüber hinaus erfahren Sie, mit welchen Diagnose-Methoden Krebs nebenwirkungsfrei diagnostiziert werden kann und das sogar Jahre im Voraus. Ob Schulmedizin oder nicht- nachdem Sie dieses Buch gelesen haben, können Sie das selbst entscheiden. Jedoch kann nur ein umfassend INFORMIERTER Patient auch weise Entscheidungen treffen. Lassen Sie sich diese Freiheit nicht nehmen!

PET in Oncology - Jürgen Ruhlmann 2012-12-06

In describing the principles of PET, this makes for a useful resource for incorporating the technique in clinical practice. In clear and straightforward fashion, the book offers instructive information and overviews of the physical, biochemical and clinical principles of PET scanning and its routine clinical use. It serves as a reference work for specialists in nuclear medicine and for oncologists, while also providing students and physicians in other medical specialties with a general introduction to the effective integration of this modern technique in routine clinical diagnostics. Above all, it illustrates the importance of PET in comparison with other imaging techniques.

Surgical Treatment of Colorectal Liver Metastases - Lorenzo Capussotti 2011-01-27

Surgery is the gold standard treatment of colorectal liver metastases. Patients management had a dramatic evolution during the past years: more accurate diagnostic tools and more effective chemotherapy regimens have been introduced and surgical indications have been widely broadened. A multidisciplinary treatment is now mandatory, involving oncologists, radiologists and gastroenterologists. However, many topics are still debated. In the present book all aspects of surgical treatment of colorectal liver metastases are analyzed based on a systematic, updated analysis of the literature. Aim of this book is to provide surgeons, oncologists and radiologists a clear overview of the state-of-the-art of treatment of colorectal liver metastases.

Insider-Heilverfahren gegen Krebs (4. Auflage 2021) - Christian Meyer-Esch 2021-06-06

In diesem smarten, wissenschaftlich fundierten Ratgeber steht alles, was ein Krebs-Patient wissen MUSS: Rund 70 alternative Krebstherapien mit zahlreichen Studien, Erfahrungsberichten, Dosierungs-Richtwerten, Kosten und Bezugsquellen. Auch im Jahre 2021 bekommen Krebspatienten immer noch fragwürdige Chemotherapien vorgesetzt, die nachweislich bei den meisten Krebsarten überhaupt keine Wirkung haben. Im Gegenteil, das Risiko an Krebs zu erkranken nimmt dadurch noch weiter zu. Warum werden Krebspatienten mit einer "Heil"-Methode behandelt, die genau diese Krankheit AUSLÖST? Auch ist die Heilungsrate in all den letzten Jahren und Jahrzehnten kaum gestiegen. Ist eine Heilung möglicherweise gar nicht gewollt, weil man mit den jetzigen Methoden sehr gutes Geld verdienen kann? Dieses Buch beweist mit zahlreichen Studien, dass die Krebsforschung deutlich weiter ist, als man uns in den Mainstream-Medien und der Schulmedizin erzählt. Es werden zahlreiche Heilverfahren vorgestellt (darunter u.a. organisches Germanium, intravenöses Vitamin C, Salvestrol, Melatonin, um nur einige zu nennen), die in wissenschaftlichen Studien, teils sogar in Fall-Studien an Menschen, nachweislich zur Heilung geführt haben. Wohl gemerkt allein und ohne Hilfe von Chemotherapie oder Bestrahlung! Darüber hinaus erfahren Sie, mit welchen Diagnose-Methoden Krebs nebenwirkungsfrei diagnostiziert werden kann und das sogar Jahre im Voraus. Surgical Pathology of Tumors of Domestic Animals - Paola Roccabianca 2020-08-31

This is the third edition of the International Histologic Classification of Tumors of Soft Tissues of Domestic Animals. The original was published in 1974 by the World Health Organization and authored by E. Weiss and K. Frese. The second edition was published in 1998 and authored by M. J. Hendrick, E. A. Mahaffey, F. M. Moore, J. H. Vos and E. J. Walder and edited by F. Y. Schulman. Over the last 4 decades it has become clear that many tumor entities are unique for different animal species, and a simple adaptation of the WHO classification of human tumors to animal tumors would not be sufficient to provide an accurate diagnosis and prognosis for tumors in domestic animals. While comparative pathology is still an integral part of veterinary tumor pathology, even entities that are morphologically similar between humans and other animals may have a different immunophenotype, different biological behavior or a different response to various therapies. This third series will, therefore, be titled "Surgical Pathology of Tumors of Domestic Animals" and will now be published by the Davis-Thompson Foundation. The third volume of this series covers tumors of soft tissue. In contrast to humans, soft tissue neoplasms encompass some of the most common neoplastic entities in dogs and cats. Included in this volume are fibrous, adipocytic, vascular and perivascular, striated and smooth muscle, mesothelial, synovial and nerve sheath tumors, as well as extraskeletal chondro-osseous tumors. Tumors of cartilage and bone will be covered in the fourth volume of this series, and round cell neoplasms will be addressed in the volume of this series dedicated to hematopoietic neoplasms. In contrast to previous versions, this volume will also contain information on differential diagnoses and prognosis for each tumor entity as well as cytology. The focus of this series will be on tumors in dogs and cats and, to a lesser degree, horses. Neoplasms in domestic livestock are rare and will only be addressed when unique entities require special mention. Similarly, tumors in ferrets, as the third most common pet, will be included.

Diagnostic Imaging of the Foot and Ankle - Ulrike Szeimies 2014-12-17

The foot has a special place in musculoskeletal diagnosis due to its complex anatomy and because many similar symptoms can have different causes, each requiring a different approach to treatment. The evaluation of foot disorders and diseases requires close clinical-radiological correlation and communication with foot experts. Foot disorders and

injuries increase with age, due in part to the rising popularity of recreational sports in all age groups. Diagnostic Imaging of the Foot and Ankle will help you train your eye to recognize disorders and diseases of the foot and ankle, including those that are often misdiagnosed or overlooked. Key Features: By practitioners for practitioners: First-hand knowledge from leading surgical and orthopedic foot experts and radiologists Clear and concise: A textbook and reference in a user-friendly layout focused on the foot and ankle Uniform format: Entities are described by definition, clinical presentation, imaging modalities, typical imaging features, differential diagnosis, treatment options, course, and pitfalls Clinical aspects and treatment: Clinical-radiological correlation plus a concise review of treatment options The new standard: This information on the foot and ankle is available nowhere else in such a condensed form Highest quality images: More than 500 superb illustrations including high-resolution images acquired with high-field MRI and multi-channel coils

Zentralblatt für allgemeine Pathologie u. pathologische Anatomie - 1976

Science, the State and the City - Geoffrey Owen 2016-04-15

The book examines the evolution of one of the most important technologies that has emerged in the last fifty years: biotechnology - the use of living organisms, or parts thereof to create useful products and services. The most important application of biotechnology has been in medicine, in the development of new drugs. The central purpose of the book is to explain how firms based in the US took the lead in commercialising the technology, and why it has been so difficult for firms in other countries to match what the leading American companies have achieved. The book looks at the institutions and policies which have underpinned US success in biotechnology. This is the US innovation "ecosystem," and it is made up of several interlocking elements which constitute a powerful competitive advantage for US biotechnology firms. These include, a higher education system which has close links with industry, massive support from the Federal government for biomedical research, and a financial system which is well equipped to support young entrepreneurial firms in a science-based industry. In the light of US experience the book examines in detail the performance of UK biotechnology firms over the past forty years, starting with the creation of the UK's first dedicated biotech firm, Celltech, in 1980. The book shows how the UK made a promising start in the 1980s and 1990s but failed to build on it. Several leading firms failed, and after an initial burst of enthusiasm investors lost confidence in the British biotech sector. It is only the last few years that the sector has staged a revival, attracting fresh investment from the US as well from the UK. The story told in this book, based on extensive interviews with industry participants, investors, and policy makers in the UK, Continental Europe, and the US, sheds new light on one of the central issues facing governments in the advanced industrial countries - how to create and sustain new science-based industries.

Heilung gegen alle Regeln - Beata Bishop 2012

TNM-Atlas - Bernd Spiessl 2013-04-17

Confronted with a myriad of T's, N's and M's in the VICC TNM booklet, classifying a malignancy may seem to many cancer clinicians a tedious, dull and pedantic task. But at a closer look at the TNM Atlas all of a sudden lifeless categories become vivid images, challenging the clinician's know-how and investigational skills. Brigit van der Werf-Messing, M.D. Professor of Radiology Past Chairman of the International TNM-Committee of the VICC Rotterdam, July 1982 Preface In 1938 the League of Nations Health Organization published an Atlas Illustrating the Division of Cancer of the Uterine Cervix into Four Stages (J. Heyman, ed., Stockholm). Since this work appeared, the idea of visual representation of the anatomical extent of malignant tumours at the different stages of their development has been repeatedly discussed. At its meeting in Copenhagen in July 1954, the DICC adopted as part of its programme "the realization of a clinical atlas". However, the time to do the planned book of illustrations was not ripe until the national committees and international organizations had officially recognized the 28 classifications of malignant tumours at various sites as presented in the third edition of the TNM Booklet edited by M. Harmer (TNM Classification of Malignant Tumours, 1978). This was all the more important since publication of the Booklet was followed in 1980 by publication of a Brochure of Checklists, edited by A.H.
