**The Vocabulary of the Greek Testament** - James Hope Moulton 1997

Many words used in the New Testament are without parallel in classical Greek but have parallels in the Koine or

Common Greek. This work is a lexicon of that Koine usage and is still standard equipment for all New Testament scholars. Strong's numbers have been added for the convenience of general readers. A new scripture index enhances this volume's usability.

*Culinary Turn* - Nicolaj van der Meulen 2017-04-30

Kitchen, cooking, nutrition, and eating have become omnipresent cultural topics.

They stand at the center of design, gastronomy, nutrition science, and agriculture.

Artists have appropriated cooking as an aesthetic practice - in turn, cooks are adapting the staging practices that go with an artistic self-image. This development is accompanied by crisis of eating behaviour and a philosophy of cooking as a speculative cultural technique. This volume investigates the dimensions of a new culinary turn, combining for the very first time contributions from the theory and practice of cooking.

*Paul Klee and His Illness* - H. Suter 2010-02-01

In 1933 Paul Klee's work was branded as 'Entartete Kunst' (Degenerate Art) by the National Socialists and he was dismissed from his professorial post at the Düsseldorf Academy of Fine Arts. This led him, together with his wife Lily, to return to his 'real home' of Bern. Here his avant-garde art was not understood and Klee found himself in unasked for isolation. In 1935 Klee started to suffer from a mysterious disease. The symptoms included changes to the skin and problems with the internal organs. In 1940 Paul Klee died, but it was only 10 years after his death that the illness was actually given the name 'scleroderma' in a publication about Klee. However, the diagnosis remained mere conjecture. Since his adolescence, the dermatologist and venereologist Dr. Hans Suter has been fascinated by Paul Klee and his art, and more than 30 years ago this fascination spurred him to commence research into the illness and its influence on the art of Paul Klee's final years. It

was due to Dr. Suter's meticulous investigations that Klee's illness could be defined as 'diffuse systemic sclerosis'. In this book the author assembles his findings and describes the rare and complex disease in a clear and comprehensible way. Further, he empathetically interprets more than 90 of Klee's late works. The point of view of a dermatologist renders a unique source of information. It provides, on one hand, new insights into everyday medical practices at the University of Bern in the 1930s, which will fascinate doctors and local historians alike. While, on the other hand, art historians and art lovers will be absorbed by the newly discovered links between Paul Klee's work and his illness.

Laborwerte von A-Z - Marc Deschka 2011-03-10

Auch in der vierten Auflage schafft "Laborwerte von A-Z" Übersicht über die wichtigsten medizinischen Laboruntersuchungen. Alphabetisch sortiert und mit einem integrierten

Griffregister schnell auffindbar, bietet dieses kompakte Taschenlexikon alle praxisrelevanten Informationen zu den gesuchten Laborwerten. Neben einer verständlichen Erläuterung der praktischen Bedeutung der einzelnen Laborwerte werden Angaben zur diagnostischen Bedeutung von Abweichungen aus dem Referenzbereich sowie praktische Tipps über die Probengewinnung, das zu verwendende Probenmaterial und die korrekte Handhabung der gewonnenen Proben bis zur Analyse durch das Labor dargestellt.

Fastest, Highest, Strongest - Rob Beamish 2006-09-27

Fastest, Highest, Strongest presents a comprehensive challenge to the dominant orthodoxy concerning the use of performance-enhancing drugs in sport. Examining the political and economic transformation of the Olympic Movement during the twentieth century, the authors argue that the realities of modern sport require a serious reassessment of current policies, in

particular the ban on the use of certain substances and practices. The book includes detailed discussion of: \* The historical importance of World War II and the Cold War in the development of a high-performance culture in sport \* The changing Olympic project: from amateurism to a fully professionalized approach \* The changing meaning of "sport" \* The role of sport science, technology and drugs in pursuing ever-better performance \* The major ethical and philosophical arguments used to support the ban on performance-enhancing substances in sport. Fastest, Highest, Strongest is a profound critical examination of modern sport. Its straightforward style will appeal to under- and post-graduate students as well as scholars of sports ethics and history, policy makers and all those interested in the changing nature of sport.

Anti-ageing Medicine - Astrid Stuckelberger 2008

The 21st century technological development is revolutionizing

medicine and health care, bringing new hopes to human suffering by offering cures and treatments which were unthinkable a few decades ago. This is where anti-ageing medicine finds its niche. Anti-ageing medicine aims at slowing, arresting, and reversing phenomena associated with ageing by merging biotechnological innovation and engineered solutions. Ideally, by means of the newest medical technology, the "body machinery" should be kept fit and at peak performance all life long. Early detection of age-related dysfunction should thus be "fixed" at any age with interventions such as metabolic fine tuning, enhancement, regeneration, restoration or replacement of "body parts" (i.e. organs, skin, bone or muscle). It covers a vast array of domains: from cell therapy to pharmaceutical interventions, from bio-surgery to aesthetic surgery, from human enhancement to fortified food, from smart housing and robots to toxic-

free environments. Anti-ageing medicine holds promises but also significant risks and safety issues which are addressed in this book. It presents the latest scientific evidence on what works or does not work. It also provides public policy recommendations to ensure the protection of consumers and their rights while encouraging research and development. This book is intended for academics, health professionals, business persons, consumers and policy-makers interested in the latest evidence and ethical issues about anti-ageing medicine.

*Transcending Tradition: Jewish Mathematicians in German*

*Speaking Academic Culture* -

Birgit Bergmann 2012-10-22

A companion publication to the international exhibition

"Transcending Tradition:

Jewish Mathematicians in German-Speaking Academic

Culture", the catalogue

explores the working lives and activities of Jewish

mathematicians in German-speaking countries during the period between the legal and political emancipation of the Jews in the 19th century and their persecution in Nazi Germany. It highlights the important role Jewish mathematicians played in all areas of mathematical culture during the Wilhelmine Empire and the Weimar Republic, and recalls their emigration, flight or death after 1933.

*Cultural Techniques* - Jörg

Dünne 2020-08-24

This volume presents the preliminary results of the work carried out by the

interdisciplinary cultural techniques research lab at the University of Erfurt. Taking up

an impulse from media studies, its contributions examine

—from a variety of disciplinary perspectives—the interplay

between the formative processes of knowledge and

action outlined within the conceptual framework of

cultural techniques. Case studies in the fields of history,

literary (and media) studies, and the history of science

reconstruct seemingly fundamental demarcations such as nature and culture, the human and the nonhuman, and materiality and the symbolical order as the result of concrete practices and operations. These studies reveal that particularly basic operations of spatialization form the very conditions that determine emergence within any cultural order. Ranging from manual and philological "paper work" to practices of opening up and closing off spaces and collective techniques of assembly, these case studies replace the grand narratives of cultural history focusing on micrological examinations of specific constellations between human and nonhuman actors.

**One Hundred Years of Chemical Warfare: Research, Deployment, Consequences** - Bretislav Friedrich 2017-11-26

This book is open access under a CC BY-NC 2.5 license. On April 22, 1915, the German military released 150 tons of chlorine gas at Ypres, Belgium. Carried by a long-awaited

wind, the chlorine cloud passed within a few minutes through the British and French trenches, leaving behind at least 1,000 dead and 4,000 injured. This chemical attack, which amounted to the first use of a weapon of mass destruction, marks a turning point in world history. The preparation as well as the execution of the gas attack was orchestrated by Fritz Haber, the director of the Kaiser Wilhelm Institute for Physical Chemistry and Electrochemistry in Berlin-Dahlem. During World War I, Haber transformed his research institute into a center for the development of chemical weapons (and of the means of protection against them). Bretislav Friedrich and Martin Wolf (Fritz Haber Institute of the Max Planck Society, the successor institution of Haber's institute) together with Dieter Hoffmann, Jürgen Renn, and Florian Schmaltz (Max Planck Institute for the History of Science) organized an international symposium to commemorate

the centenary of the infamous chemical attack. The symposium examined crucial facets of chemical warfare from the first research on and deployment of chemical weapons in WWI to the development and use of chemical warfare during the century hence. The focus was on scientific, ethical, legal, and political issues of chemical weapons research and deployment — including the issue of dual use — as well as the ongoing effort to control the possession of chemical weapons and to ultimately achieve their elimination. The volume consists of papers presented at the symposium and supplemented by additional articles that together cover key aspects of chemical warfare from 22 April 1915 until the summer of 2015.

### **Studie zur Asymmetrie im Rennrudern. ein Beitrag zu biomechanischen Grundlagen von Ruderleistung und Rudertechnik** - Stefanie Manzer 2020-08-05

Manzer 2020-08-05

Die Asymmetrie im Rennrudern rückt seit jüngster Vergangenheit in den Focus wissenschaftlicher Untersuchungen. Dabei stehen sowohl die Optimierung der individuellen Ruderleistung und -technik als auch bestehende Zusammenhänge zwischen asymmetrischen Bewegungsmustern beim Rennrudern und der Verletzung des unteren Rückens sowie deren Prävention im Mittelpunkt. Diese Arbeit fokussiert die Asymmetrie, um Ansätze zur Leistungs- und Technikoptimierung im Rennboot zu legen. Das Ziel bestand in der theoretischen und empirischen Untersuchung der Asymmetrie rudertechnischer Kennwerte im Skull- und Riemenrudern in Abhängigkeit von den verschiedenen Bedingungen im

Rennboot, der Seitigkeit der Stembrettkraft beim Rudern auf dem Concept2 Ergometer und der Maximalkraftfähigkeit ruderspezifischer Hauptmuskelgruppen im Vergleich von Skullern und Riemenruderern, um Ansätze für die weitere Leistungssteigerung im Rennrudern aufzuzeigen. Mit der empirischen Untersuchung konnten neue bzw. weiterführende Befunde zur Asymmetrie rudertechnischer Kennwerte im Rennboot (Skull und Riemen), beim symmetrischen Ergometerrudern und zu den Maximalkraftfähigkeiten im Vergleich von Skullern und Riemenruderern unter Berücksichtigung der Händigkeit und Füßigkeit generiert werden.

Nathan Zuntz - Hanns-Christian Gunga 2009-02-27  
This book focuses on the life and work of Nathan Zuntz (1847-1920), a German

physiologist, who made significant contributions to high altitude physiology and aviation medicine. He achieved fame for his invention of the Zuntz-Geppert respiratory apparatus in 1886 and the first treadmill (Laufband) in 1889. He also invented an X-ray apparatus to observe cardiac changes during exercise and constructed a climate chamber to study exercise under varying and sometimes extreme climates. \* Focuses on Zuntz's contribution to high altitude physiology and aviation medicine

**Pediatrics Pocketcard Set** - A. Fuchs 2012-08-14

The Pediatrics pocketcard Set summarizes information critical to the general pediatrics practice. The cards contain vital information on a variety of topics including developmental assessment, pediatric lab values and vital signs reference ranges, important physiological formulas, nutrition, fluid and electrolyte management, immunization, infectious diseases, and common

emergency drugs and doses.  
Specific topics include:  
\*APGAR score, developmental milestones, primitive reflexes  
\*Pediatric lab values: CBCs, ABGs, common serum, urine and CSF tests \*Latest infant formula recommendations from the AAP \*Glasgow coma scale, epilepsy therapy and management \*Infectious disease management including pneumonia, UTI, meningitis  
\*Emergency drugs and algorithms for seizures, asthma attacks, etc. \*And much more...  
For interns, residents, physicians, nurses and other healthcare professionals working in pediatrics.

**Die Pflegerinnen der hessischen Landesheilanstalten in der Zeit des Nationalsozialismus**

- Jamila Aiyana Roth  
2022-01-01

In der vorliegenden Arbeit liegt

der Fokus auf den in der Pflege tätigen Frauen in der Zeit ab 1939 liegen. Dort, wo sie in ihrem Arbeitsumfeld auf Männer trafen, wurden ihre Beziehungen zu diesen selbstverständlich untersucht. Daneben wurden auch die besonderen Ansprüche analysiert, die zu dieser Zeit an Pflegerinnen gestellt wurden, sowie die Rolle der zeitgenössischen Vorstellungen von Gender bei der Verurteilung weiblicher Pfleger in den Nachkriegsprozessen. Durch die Erforschung des Pflegepersonals wird eine weitere, bisher vernachlässigte Tätergruppe erstmals kollektivbiographisch präsentiert. Die Untersuchung der Rolle der Pflegerinnen bei den Zwangssterilisationen und Morden zeigt auf, wie aus vermeintlich ganz normalen, unbescholtenen Bürgerinnen Mörderinnen und deren Helferinnen bzw. Mitwisserinnen werden konnten. Dabei ist die Frage nach der Vereinbarkeit der im Alltag ausgeübten Verbrechen

mit dem eigenen Verständnis von Weiblichkeit sowie dem eigenen Unrechtsempfinden zentral. Die Pflegerinnen sind deshalb von zentraler Bedeutung, weil ihr Handeln und Unterlassen direkte Konsequenzen nicht nur für das Wohlergehen der Pfleglinge hatte, sondern sie damit auch über Leben und Tod entschieden. Darüber hinaus stößt die präsentierte Thematik dringende aktuelle Debatten wie etwa zur Pränataldiagnostik und zur Sterbehilfe an. So wirft die eingehende Beschäftigung mit dem Thema „Zwangssterilisationen und Krankenmorde in der Zeit des Nationalsozialismus“ wichtige Fragen auf und stellt Konzepte, beispielsweise zum Gesundheitsbegriff sowie dem Wert (ungeborenen) Lebens, wichtigen Reflexionen anheim: Gibt es überhaupt „lebensunwertes“ Leben? Was genau macht ein Leben lebenswert? Was ist eigentlich Gesundheit und wer kann als gesund bezeichnet werden? Der Fortschritt in der

Pränataldiagnostik sowie die damit verbundenen Schwangerschaftsabbrüche werfen demnach wichtige ethische Fragen auf. Auch die Debatte um die Sterbehilfe steht dem in nichts nach: So wurden die Krankenmorde in der Zeit des Nationalsozialismus euphemistisch als „Euthanasie“ oder „Gnadentod“ bezeichnet und deren Ausübung von vielen der Pflegerinnen in Retrospektive als Dienst aus reiner Nächstenliebe verklärt. *Words in Context* - Louise Carleton-Gertsch 2013-02-18 Der Klassiker unter den Oberstufenwortschätzen - vollständig überarbeitet! The Cambridge History of Science: Volume 1, Ancient Science - Alexander Jones  
2018-12-13

This volume in the highly respected Cambridge History of Science series is devoted to the history of science, medicine and mathematics of the Old World in antiquity. Organized by topic and culture, its essays by distinguished scholars offer the most comprehensive and up-to-date history of ancient science currently available. Together, they reveal the diversity of goals, contexts, and accomplishments in the study of nature in Mesopotamia, Egypt, Greece, Rome, China, and India. Intended to provide a balanced and inclusive treatment of the ancient world, contributors consider scientific, medical and mathematical learning in the cultures associated with the ancient world.

*Philipp Franz von Siebold and His Era* - A. Thiede 2013-01-16  
The Dutch East Indian Company was founded about 400 years ago, and in 1641 the artificial island of Dejima in the port of Nagasaki became its base. This island represented the only bridge between Japan, at that time in self-isolation, and the European countries, the Netherlands in particular. The physician and surgeon Philipp Franz von Siebold, born in Würzburg in 1796, was appointed as factory doctor of the Dutch East Indian Company in Dejima and, later on, he made history as the scientific discoverer of Japan for the Western world. His grandfather Karl Kaspar von Siebold was the first real university surgeon in Würzburg from 1796 until 1807, and was "the prominent surgeon of Southern Germany". In commemoration of Philipp Franz von Siebold, his 200th birthday and the developments introduced by him were celebrated by various events in Nagasaki and Würzburg in 1996. The present volume casts

spotlights on medicine and surgery during this time, his achievements, and his surroundings, as well as on modern developments and the relationship between Europe and Japan.

Dermal Exposure (PDF) - World Health Organization  
2014-05-02

This "Environmental Health Criteria" (EHC) series publication addresses dermal exposure to chemicals. It describes sources and pathways of dermal exposure, models and tools to estimate dermal exposure and methods for dermal exposure prevention and reduction. Furthermore, the EHC introduces skin diseases associated with dermal exposure. This EHC aims to provide information to national regulatory authorities to assist in conducting health risk assessments and managing the risk involving dermal exposure to chemicals.

Freud in Zion - Eran Rolnik  
2018-03-05

Freud in Zion tells the story of psychoanalysis coming to Jewish Palestine/Israel. In this ground-breaking study psychoanalyst and historian Eran Rolnik explores the encounter between psychoanalysis, Judaism, Modern Hebrew culture and the Zionist revolution in a unique political and cultural context of war, immigration, ethnic tensions, colonial rule and nation building. Based on hundreds of hitherto unpublished documents, including many unpublished letters by Freud, this book integrates intellectual and social history to offer a moving and persuasive account of how psychoanalysis permeated popular and intellectual discourse in the emerging Jewish state.

Naturwissenschaft und Medizin  
des 1979-01-01

Der vorliegende Medizin-  
Duden ist eine

Gemeinschaftsarbeit des Biblio-  
graphischen Instituts und des  
Georg Thieme Verlags. Er  
basiert auf einer

Materialsammlung, die  
Hermann Lichtenstern im  
Rahmen seiner Tätigkeit als  
wissenschaftlicher Lektor  
innerhalb eines Zeitraums von  
fast 20 Jahren angelegt hat.

Die einzelnen Wortartikel  
wurden in kollegialer  
Zusammenarbeit zwi schen  
Medizinern und Philologen  
ausgearbeitet. Die

Zusammenarbeit stand immer  
unter dem Leitgedanken, in  
diesem Buch die langjährige  
Erfahrung des Georg Thieme  
Verlags auf medizinisch-  
fachsprachlichem Gebiet und  
die reiche philologische  
Erfahrung der Dudenredaktion  
zum Vorteil des Benutzers  
miteinander zu verbinden. Das

Buch ist für einen breiten  
Personenkreis gedacht. Es soll  
sowohl den erfahrenen Arzt als  
auch den medizinisch  
interessierten Laien  
ansprechen. Das aber bringt  
eine gewisse Schwierigkeit mit  
sich. Das Buch muß näm lich  
einerseits dem Arzt über den  
selbstverständlichen Umfang  
seines Fachwissens hinaus  
jederzeit zusätzliche  
Informationen liefern können,  
ohne sich in die beschreibende  
Einzeldarstellung eines  
Speziallexikons zu verlieren. Es  
soll andererseits ein geeignetes  
Nachschlagewerk für den  
Laien sein, das medizinische  
Fachausdrücke, denen er im  
täglichen Leben begegnet, in  
knapper und leicht  
verständlicher Form erklärt.

Machine Medical Ethics -  
Simon Peter van Rysewyk  
2014-09-05

The essays in this book, written  
by researchers from both  
humanities and science,  
describe various theoretical  
and experimental approaches  
to adding medical ethics to a  
machine, what design features  
are necessary in order to

achieve this, philosophical and practical questions concerning justice, rights, decision-making and responsibility in medical contexts, and accurately modeling essential physician-machine-patient relationships. In medical settings, machines are in close proximity with human beings: with patients who are in vulnerable states of health, who have disabilities of various kinds, with the very young or very old and with medical professionals. Machines in these contexts are undertaking important medical tasks that require emotional sensitivity, knowledge of medical codes, human dignity and privacy. As machine technology advances, ethical concerns become more urgent: should medical machines be programmed to follow a code of medical ethics? What theory or theories should constrain medical machine conduct? What design features are required? Should machines share responsibility with humans for the ethical consequences of medical actions? How ought clinical

relationships involving machines to be modeled? Is a capacity for empathy and emotion detection necessary? What about consciousness? This collection is the first book that addresses these 21st-century concerns.

**Anatomie Lernen Durch Beschriften** - Elsevier GmbH  
2020-01-29

Das Arbeitsbuch bietet Ihnen mehr als 160 hochqualitative anatomische Abbildungen zum Beschriften. Ergänzend zu den wichtigsten anatomischen Strukturen vermitteln Ihnen Übungsaufgaben wichtige physiologische Prozesse zu den jeweiligen Organsystemen. So setzen Sie sich mit den Abbildungen intensiver auseinander, als wenn Sie sich fertig beschriftete Bilder in einem Lehrbuch ansehen. In den Tabellen auf der gegenüberliegenden Seite tragen Sie die Fachbegriffe ein,

in Deutsch und in lateinischer Fachbezeichnung. So können Sie einen größeren Lernerfolg für sich verbuchen.

Übersichtlicher Aufbau: Auf der linken Seite finden sich die zu beschriftenden Zeichnungen, auf der rechten gegenüber liegenden Seite Tabellen, in denen die Lösungen eingetragen werden. Kurze vertiefende Texte und weitere Lernaufgaben zum Thema komplettieren das Buch. Vielseitig einsetzbar: Kompatibel mit den gängigen Lehrbüchern für Pflege- und Gesundheitsberufe. Plus für Auszubildende: Lösungsteil im Buch. Ideal auch zur Prüfungsvorbereitung und dem Erlernen der wichtigsten Fachbegriffe. Neu in der 3. Auflage: Zusätzliche Übungsaufgaben und Lösungen integriert.

**Poetics and Politics** - Toni Bernhart 2018-08-21  
Far from teleological historiography, the pan-

European perspective on Early Modern drama offered in this volume provides answers to why, how, where and when the given phenomena of theatre appear in history. Using theories of circulation and other concepts of exchange, transfer and movement, the authors analyze the development and differentiation of European secular and religious drama, within the disciplinary framework of comparative literature and the history of literature and concepts. Within this frame, aspects of major interest are the relationship between tradition and innovation, the status of genre, the proportion of autonomous and heteronomous creational dispositions within the artefacts or genres they belong to, as well as strategies of functionalization in the context of a given part of the cultural net. Contributions cover a broad range of topics, including poetics of Early Modern Drama; political, institutional and social practices; history of themes

and motifs (Stoffgeschichte); history of genres/cross-fertilization between genres; textual traditions and distribution of texts; questions of originality and authorship; theories of circulation and net structures in Drama Studies.

Paper Machines - Markus Krajewski 2011-08-19  
Why the card catalog—a “paper machine” with rearrangeable elements—can be regarded as a precursor of the computer. Today on almost every desk in every office sits a computer. Eighty years ago, desktops were equipped with a nonelectronic data processing machine: a card file. In Paper Machines, Markus Krajewski traces the evolution of this proto-computer of rearrangeable parts (file cards) that became ubiquitous in offices between the world wars. The story begins with Konrad Gessner, a sixteenth-century Swiss polymath who described a new method of processing data: to cut up a

sheet of handwritten notes into slips of paper, with one fact or topic per slip, and arrange as desired. In the late eighteenth century, the card catalog became the librarian's answer to the threat of information overload. Then, at the turn of the twentieth century, business adopted the technology of the card catalog as a bookkeeping tool. Krajewski explores this conceptual development and casts the card file as a “universal paper machine” that accomplishes the basic operations of Turing's universal discrete machine: storing, processing, and transferring data. In telling his story, Krajewski takes the reader on a number of illuminating detours, telling us, for example, that the card catalog and the numbered street address emerged at the same time in the same city (Vienna), and that Harvard University's home-grown cataloging system grew out of a librarian's laziness; and that Melvil Dewey (originator of the Dewey Decimal System) helped bring about the technology transfer of card files to

business.
