Fire Department Strategic Planning, 3rd Edition - Mark Wallace  
2021-01-18

From the author: This 3rd edition is about organized common sense in the fire service. Section One provides support to fire departments that already have a strategic plan and just need to update and revise their existing plan. I have found over my 30 years of consulting with fire department's that they want to accomplish their next iteration of their strategic plan as rapidly as possible. Section Two provides a detailed "How-to" guide to help a fire department create its first strategic plan. Section Two is divided into four parts: (1) Understanding the Department, (2) Understanding the Situation, (3) Understanding the Strategic Issues Facing the Department, and (4) Creating Organizational Change. A new chapter (Chapter 20) provides assistance to those departments having challenges with their strategic plan and obtaining the desired outcomes/results. It adds a new troubleshooting process for those departments having challenges to create an effective and successful strategic plan. The book is designed to be effective as a manual to develop an individual fire department's strategic plan as well as a textbook for use in upper division college/university courses or as a text for post-graduate courses.

**The context of natural forest management and FSC certification in Brazil** - Claudia Romero 2015-12-30

Management decisions on appropriate practices and policies regarding tropical forests often need to be made in spite of innumerable uncertainties and complexities. Among the uncertainties are the lack of formalization of lessons learned regarding the impacts of previous programs and projects. Beyond the challenges of generating the proper information on these impacts, there are other difficulties that relate with how to socialize the information and knowledge gained so that change is transformational and enduring. The main complexities lie in understanding the interactions of social-ecological systems at different scales and how they varied through time in response to policy and other processes. This volume is part of a broad research effort to develop an independent evaluation of certification impacts with stakeholder input, which focuses on FSC certification of natural tropical forests. More specifically, the evaluation program aims at building the evidence base of the empirical biophysical, social, economic, and policy effects that FSC certification of natural forest has had in Brazil as well as in other tropical countries. The contents of this volume highlight the opportunities and constraints that those responsible for managing natural forests for timber production have experienced in their efforts to improve their practices in Brazil. As such, the goal of the studies in this volume is to serve as the foundation to design an impact evaluation framework of the impacts of FSC certification of natural forests in a participatory manner with interested parties, from institutions and organizations, to communities and individuals.
