Animal Sonar Systems - R. Busnel 2013-06-29

Thirteen years have gone by since the first international meeting on Animal Sonar Systems was held in Frascati, Italy, in 1966. Since that time, almost 900 papers have been published on its theme. The first symposium was vital as it was the starting point for new research lines whose goal was to design and develop technological systems with properties approaching optimal biological systems. There have been highly significant developments since then in all domains related to biological sonar systems and in their applications to the engineering field. The time had therefore come for a multidisciplinary integration of the information gathered, not only on the evolution of systems used in animal echolocation, but on systems theory, behavior and neurobiology, signal-to-noise ratio, masking, signal processing, and measures observed in certain species against animal sonar systems. Modern electronics technology and systems theory which have been developed only since 1974 now allow designing sophisticated sonar and radar systems applying principles derived from biological systems. At the time of the Frascati meeting, integrated circuits and technologies exploiting computer science were not well enough developed to yield advantages now possible through use of real-time analysis, leading to, among other things, a definition of target temporal characteristics, as biological sonar systems are able to do. All of these new technical developments necessitate close cooperation between engineers and biologists within the framework of new experiments which have been designed, particularly in the past five years.

Readings in Animal Cognition - Marc Bekoff 1996

This collection of 24 readings is the first comprehensive treatment of important topics by leading figures in the rapidly growing interdisciplinary field of animal cognition. Taken together the essays provide the nucleus for an introductory course in animal cognition (cognitive ethology and comparative psychology), philosophy of biology, or philosophy of mind. Selections are grouped in five sections: Perspectives on Animal Cognition; Cognitive and Evolutionary Explanations; Recognition, Choice, Vigilance, and Play; Communication and Language; and Animal Minds. Seventeen essays are reprinted from the authors much cited two-volume collection, Interpretation and Explanation in the Study of Animal Behavior. One essay taken from that book has been subsequently revised, and five additional essays are recent examples of critical thinking in cognitive ethology. The preface and final chapter, "Ethics and the Study of Animal Cognition," are new. A Bradford Book

Old English Medical Remedies - Sinead Spearing 2018-02-28

In 9th century England Bishop Iffeah the Bald is dabbling with magic. By collecting folk remedies from pagan women he risks his reputation. Yet posterity has been kind, as from the pages of Balds book a remedy has been found that cures the superbug MRSA where modern antibiotics have failed. Within a few months of this discovery a whole new area of medical research called Ancientbiotics has been created to discover further applications for these remedies. Yet, what will science make of the elves, hags and nightwalkers which also stalk the pages of Bald's book and its companion piece Lacnunga, urging prescriptions of a very different, unsettling nature. Cures for the 'moon mad' and hysteria are interspersed with directives to drink sheeps dung and jump across dead mens graves. Old English Medical Remedies explores the herbal efficacy of these ancient remedies whilst evaluating the supernatural, magical elements and suggests these provide a powerful psychological narrative revealing an approach to healthcare far more sophisticated than hitherto believed. All the while, the voices of the wise women who created and used these remedies are brought to life, after centuries of denomination by the Church.

Animal Bodies, Human Minds: Ape, Dolphin, and Parrot Language Skills - W.A. Hillix 2004

Several books chronicle attempts, most of them during the last 40 years,

to teach animals to communicate with people in a human-designed language. These books have typically treated only one or two species, or even one or a few research projects. We have provided a more encompassing view of this field. We also want to reinforce what other authors, for example Jane Goodall, Sue Savage-Rumbaugh, Penny Patterson, Birute Galdikas, and Roger and Deborah Fouts, so passionately convey about our responsibility for our closest animal kin. This book surveys what was known, or believed about animal language throughout history and prehistory, and summarizes current knowledge and the controversy around it. The authors identify and attempt to settle most of the problems in interpreting the animal behaviours that have been observed in studies of animal language ability.

From the cup of coffee that jumpstarts the day to dangerously addictive drugs, the recreational use of plants with psychoactive properties has a long history among humans. But, as with many things, it turns out that other animals got there first. From parrots to primates, consuming medicinal chemicals is an instinctive behavior that helps countless organisms fight infection and treat disease. But the similarities don't end there: Like us, many creatures also consume substances that have no apparent benefit . . . except for inducing intoxication. In fact, animals have been using drugs for recreational purposes since prehistoric times. We may even have animals to thank for the idea—legend says that coffee was discovered by observing the behavior of goats that had eaten it. In his previous book, *Strange Survivors*, author and biologist Oné R. Pagán introduced readers to some of the truly bizarre strategies animals use to survive in the cutthroat world of natural selection. Now, in *Drunk Flies and Stoned Dolphins*, he sheds light on the surprising cravings they indulge when it's time to unwind. In this book, you'll get an eye-opening glimpse into the mind-altering behavior of the non-human members of the animal kingdom, spanning insects to elephants—including the dolphin species that apparently likes to pass around an intoxicating pufferfish as if they were sharing a joint. Combining fascinating science with humor and enthusiasm, Pagán's latest is full of the kind of unforgettable stories and odd facts that you'll find yourself repeating to everyone you meet. From fruit fly happy hour to the evolutionary reasons behind nature's drugs, *Drunk Flies and Stoned Dolphins* takes you on a trip through the colorful world of animal intoxication—and along the way, explores what this science reveals about the surprising connections between all the world's creatures.
