**The Fourth Industrial Revolution** - Klaus Schwab 2017-01-03

World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

*Structure and the Metaphysics of Mind* - William Jaworski 2016-03-04

*Structure and the Metaphysics of Mind* is the first book to show how hylomorphism can be used to solve mind-body problems—persistent problems understanding how thought, feeling, perception, and other mental phenomena fit into the physical world described by our best science. Hylomorphism claims that structure is a basic ontological and explanatory principle. Some individuals, paradigmatically living things, consist of materials that are structured or organized in various ways. Those structures are responsible for individuals being the kinds of things they are, and having the kinds of powers or capacities they have. From a hylomorphic perspective, mind-body problems are byproducts of a worldview that rejects structure. Hylomorphic structure carves out distinctive individuals from the otherwise undifferentiated sea of matter and energy described by our best physics, and it confers on those individuals distinctive powers, including the powers to think, feel, and perceive. A worldview that rejects hylomorphic structure lacks a basic principle which distinguishes the parts of the physical universe that can think, feel, and perceive from those that can't, and without such a principle, the existence of those powers in the physical world can start to look inexplicable and mysterious. But if mental phenomena are structural phenomena, as hylomorphism claims, then they are uncontroversially part of the physical world, for on the hylomorphic view, structure is uncontroversially part of the physical world. Hylomorphism thus provides an elegant way of solving mind-body problems.
