Creating Lean Dealers - David Brunt 2006-12-01

What is in Creating Lean Dealers? Creating Lean Dealers is a DIY guide to enable dealers to achieve such a step-change for themselves. It works through, using examples, diagrams and detailed instructions, how to transform performance in service and repair. Then it goes on to describe how the same logic can be applied to all other areas of the dealer business to give a win-win-win for customers, dealer staff and shareholders. The journey to becoming a Lean dealer begins by getting a real understanding of two things: The ability of the processes in the dealership to deliver right first time on time at every step - a measure that authors David Brunt and John Kiff call 'Customer Fulfilment' because it is the core of what

customers value. The actual demand on those processes and separating it into different types. The next step is to use these measures, together with a map of the 'current state' of the process, to define and prioritise what the problems are and then address them, with the teams who do the work, in a structured way using the Plan-Do-Check-Act method of improvement. A series of questions then guides the dealer to develop a 'future state' map of the process - a picture of what the process will look like, typically in 6 months time, when the problems have been addressed and some of the wastes eliminated so that more of the time is spent creating the value that customers want - what Lean thinkers call 'Flow'. An accompanying action plan lists the 'bite-sized steps' needed to achieve the transformation. But like every transformational change, management plays a critical role. Without a fully committed CEO leading from the top improvements are almost certainly doomed to fail.

It soon becomes apparent that management has to question and sometimes 'unlearn' many of its traditional management methods. Core to this is shifting the mind-set from managing results to managing processes using visual progress boards (rather than computers) on a daily or even an hourly basis - because good results are a direct product of good processes.

Identity-Preserved Systems -

Dennis Strayer 2002-05-23

Identity-Preserved Systems: A Reference Handbook provides background for the development of processes or systems of maintaining the segregation of and documenting the identity of a product. Growers and other parties that handle, transport, condition, or process the identity-preserved (IP) product must follow strict growing and handling practices, including segregation, inspections, and cleaning of equipment to prevent other varieties from mixing with or contaminating the IP variety. The key to this system is traceability. Each production, processing, and delivery step is documented, so that products can be traced from the store shelf back to the farmers' fields and every stage in between. The need for Identity Preservation (IP) is rapidly becoming of major importance in the world trade of agricultural crops that are enhanced genetically, grown

under specific conditions, or have specific characteristics which must be identified and maintained from the seed planted to the delivery of the crop to the end-user. The handbook serves as an authoritative resource that unifies IP efforts, outlines the protocols for IP systems, and includes an operational manual that may be used at any point in the value-chain of the production and marketing effort. This handbook describes an overall identity-preserved (IP) system, which may be utilized in ways that will meet the particular needs of the parties involved in specific trade agreements. It discusses the background of IP systems originating in the seed industry, the basics of a total IP system, and the potential electronic transfer of data and documents. By using the system of identity-preserved verification provided in Identity-Preserved Systems, the seed, specialty crop, and grain and oilseed industries can easily provide products that are identified with a paper

trail verifying identity, product quality, and special characteristics.

Investing in Condominiums - Brian Persaud 2011-11-08

A lot of information has been published for those who wish to buy a condo as a principal residence, but not for investors who want to expand into the condominium market. Investing

in condominiums is not about being caught up in the mass hysteria of lining up to buy a pre-construction unit in a "hot neighbourhood" and hopefully flipping it at a profit when it's built. On the contrary, investing in condos can be a very good way to generate solid returns when done according to the proven strategies outlined in the book. Investing in Condominiums will show readers the ins and outs of profitable condo investing by sticking to investing fundamentals, carrying out proper due diligence, and having an exit plan. Pre-construction condominiums, especially in Toronto and Vancouver are sought-after by both Canadian and international investors. The stable economy, low-interest rate environment, and appreciating values are a recipe for investor success. Investing in Condominiums gives Canadian investors the nuts and bolts of undertaking such an investment based on real-life examples and expert

knowledge. By reading this book, the investor can proceed with full confidence knowing that they are asking the right questions, doing the math, and assembling the right team of experts that will help them realize their investment goals.

Power Tools for Negotiating International Business Deals - James M. Klotz

2008-01-01

Doing International Business?

Here are the Tools! Power Tools for Negotiating

International Deals is a nuts and bolts guide. This book is the handbook read before the negotiation. It is also to be

used during the negotiation when a decision to stand firm or compromise must be made.

Power Tools for Negotiating International Deals shows how international business works, where to stake high ground, what concessions to make, and what mistakes to avoid. Filled with checklists and case examples, these are the power

tools needed for negotiating business deals in the global marketplace. When negotiating an international deal, there is often only one good opportunity to strike the bargain and make the deal. To do so, a businessperson needs tools to know what to ask for, what to counter with, and what to offer up as a reasonable compromise. That is how deals get done. Without knowing the terms that would make the best international deal, the deal may still get done and it just will not be the best that could have been negotiated. Power Tools for Negotiating International Deals explains the key issues that need to be negotiated in an international business deal, be it a product sale, agency/brokerage, consulting agreement, distributorship, license, joint venture or consortium. Some of the topics covered in this book: the basics of international business deals negotiating international sales of goods and services negotiating international agency and consulting deals negotiating

international distribution deals negotiating international license deals negotiating international joint venture and consortium deals James M. Klotz is one of Canada's leading international business lawyers. In addition to cochairing the International Business Transactions group of one of Canada's largest law firms, he has written several books and treatises on international business law and negotiation. He has taught courses in international business law at Osgoode Hall Law School, Toronto, and in international risk assessment at the University of Toronto, School of Continuing Studies. When not flying around the world on deals, he lives and works in Toronto.
